

4. Return the first name, last name and city of all customers who live in Canada.
Order the results first by the last then by the first name.

```
mysql> select first_name,last_name,city from customer_list
-> where country= 'canada'
-> order by last_name,first_name;
+-----+-----+-----+
| first_name | last_name | city      |
+-----+-----+-----+
| DERRICK    | BOURQUE   | Gatineau  |
| LORETTA    | CARPENTER | Oshawa    |
| CURTIS     | IRBY      | Richmond Hill |
| DARRELL    | POWER     | Halifax   |
| TROY       | QUIGLEY   | Vancouver |
+-----+-----+-----+
5 rows in set, 2 warnings (0.00 sec)
```

5. How many customers are from Brazil??

```
mysql> select count(*) from customer_list
-> where country = 'Brazil';
+-----+
| count(*) |
+-----+
|      28 |
+-----+
1 row in set, 3 warnings (0.04 sec)
```

6. Return the "popular countries"? (that is, the ones with more than 20 customer).
For each such country, return its name and its correspond number of customers.
Order the result by the number of customers (descending).

```
mysql> select country, count(country) from customer_list
-> group by country
-> having count(country)>20
-> order by count(country) desc;
+-----+-----+
| country          | count(country) |
+-----+-----+
| India            | 60             |
| China            | 53             |
| United States    | 36             |
| Japan            | 31             |
| Mexico           | 30             |
| Brazil           | 28             |
| Russian Federation | 28             |
+-----+-----+
7 rows in set, 3 warnings (0.01 sec)
```
